PRE-ORDER ANNOUNCEMENTS - SUMMER 2019

GUARANTEED PRE-ORDER DUE DATE: WEDNESDAY AUGUST 21ST 2019

ORDERING INFORMATION & TERMS

Summer 2019

Dear Model Railroader,

Welcome to the 2019 Summer Edition of the Atlas All Scales Catalog that features our latest and greatest product announcements, arrivals, and in-stock reminders. The Atlas catalog forms the core of the distinctive 'Guaranteed Pre-order System'. Prior to the start of production, Atlas announces to authorized distributors, dealers, and consumer e-subscribers that we are nearing production and preparing to take pre-orders. Pre-order numbers help determine approximate production quantities. Orders placed before the deadline are "guaranteed" production, orders placed after are not. If interested in a specific product announcement, place your guaranteed order with your hobby shop to prevent shortages and possible availability disappointment. For assistance in finding a dealer near you, use the Atlas on-line dealer locator, or call us directly at the phone number below.

Atlas is offering a train load of exciting products found throughout this packed Summer Edition Catalog to help keep your layout building and operation cool throughout the entire season! The fireworks start in both N & HO scale with the much requested return of the EMD GP40-2. The N scale version for the first time joins its larger sibling with a complete ESU sound board. An exciting spate of all new N scale rolling stock models includes; the NACC 50' Smooth side RBL Box Car, 53'6" Flat Car, X72 Box Car, and the Bay Window Caboose. Four other popular Atlas N scale rolling stock, are also being reproduced with all new paint schemes and road numbers. HO scale is acknowledged with the inclusion of an all new Pullman Sleeper and 7 returning rolling stock offerings with new paint schemes and road numbers. The much admired Cararama construction vehicles have made it back onto the catalog pages. Last, but certainly not least, O scale is represented by the much loved and requested Comet and Horizon Passenger Cars and the X-29 Box Car. Four additional rolling stock cars with new schemes and numbers wrap up the Atlas announcement celebration. Please see the 'Table of Contents' on the facing page for scale specific models, details, and feature/order page locations.

Additionally, the catalog lists each scale represented by select limited quantity in-stock reminders of recently arrived products as well as product arrivals that are due in warehouses soon, or have just arrived. These include a healthy variety of locomotives and rolling stock and much desired Atlas track in all scales. We trust you'll enjoy the considerable amount of Atlas 'all scale' product selections found throughout the pages of this catalog and that you will see one or more models to prompt your interest to contact your dealer for a 'guaranteed' pre-order.

Wishing you all the best this holiday/vacation season along with a happy and safe 4th of July. Note, that Atlas will go on its annual summer vacation starting Friday, June 28th at 4PM EDT and will return Tuesday July 9th at 9AM EDT. Mid-year inventory will begin at that time. Please place any needed early summer in-stock orders during the next week to assure your selections will reach you before that time.

Sincerely,

Joe Kolnoski
Vice President of Sales

MASTER MODEL FEATURES:

- Directional lighting
- Walkway safety tread
- Blackened metal wheels
- Scale Speed™ motor
- Factory-equipped with AccuMate® knuckle couplers
- Dynamic brakes (as appropriate by railroad)
- Golden-white LEDs

Sound Functionality Features (GOLD LOCOMOTIVES ONLY):

- Over 20 sound effects are available, including engine start-up and shutdown, prime mover sounds through all eight notches, bell, air horn, air compressor, dynamic brakes and more.
- There are 16 user-selectable horns, 2 user-selectable bells, and 2 user-selectable synchronized brake squeals.
- Manual and Automatic Notching modes with the ability to change modes "on the fly" are provided for true realism.

PROTOTYPE INFORMATION:

Atlas' high quality N Scale locomotive is modeled after Electro Motive Division's 2000 horsepower GP-38 diesel introduced in the late 1960s and built through the early 1970s and is still in service today throughout North America. The GP-38 is usually identified by its two radiator fans located on top of the long hood and two small exhaust stacks.

The GP-40 was produced by the Electro Motive Division in the late 1960s and early 1970s, the GP-40 was a 3000 horsepower locomotive best characterized by the three full size radiator fans on the rear of the roof.

Silver Sound Ready™

Atlas Silver Sound Ready models are equipped with a speaker for easy conversion to sound with the addition of a decoder. If you need assistance with the upgrade of a Sound Ready model, please contact Atlas Customer Service at 908-687-0880 or csdept@atlasrr.com

DCC OPERATION FEATURES:

- Supports all DCC-programming modes
- DCC includes RailCom and RailComPlus, with 14, 28 or 128 speed steps and with 2-digit and 4-digit addressing.
- Flexible mapping of function keys F0 to F28.
- A total of 6 DCC function outputs are available, and all can be function mapped (disable, brightness, light effects) individually
- Follows all NMRA DCC standards and recommended practices.

- Manual and Automatic Notching modes with the ability to change modes "on the fly" are provided for true realism.

PROTOTYPE INFORMATION:

Built by the American Locomotive Company (Alco) the low-hood S-2 was introduced in 1940 to replace Alco's earlier high-hood switchers. The 1000 horsepower S-2 was a turbocharged version of the S-1. There were 1,502 S-2s sold to North American Railroads. The versatility of the S-2s was evidenced by their service on mainline, shortline and industrial railroads.

PROTOTYPE INFORMATION:

Between 1963 and 1965, the Chicago Ridge plant of North American Car Company (NACC) produced nearly 750 of their first homegrown RBL, an inside post, or "smoothside" car. Effectively a transitional design between the Pacific Car and Foundry offset door cars, and the later, and more commercially successful, outside post RBLs, this car featured a centered plug door and was only available in a single 50' 1" interior length. Though not as numerous as the outside post variations, as lease cars, they could be found sporting numerous colorful paint schemes throughout their long lifetimes from the 60's through the early 2000's.

MASTER MODEL FEATURES:

- Colorful, accurate paint schemes and roadnumbers
- Free-rolling trucks with knuckle couplers

PROTOTYPE INFORMATION:

The flat car has long been a versatile and venerable car in the railroading industry. With four open sides, any commodity could be loaded onto the car without constraints. Starting in the mid-60s, a new group of 53' 6" flatcars were built to accommodate each railroad's needs. The cars were built with a wood deck, along with stake pockets on the sides of the car. Many of these lasted through the 80's and longer in MOW service fleets.

MASTER MODEL FEATURES:

- Colorful, accurate paint schemes and roadnumbers
- Free-rolling trucks with knuckle couplers
- Separate brake wheel

PROTOTYPE INFORMATION:

In 1972, the Penn Central and Western Pacific placed an order for smooth-sided box cars from US Railroad Manufacturing (Evans), located in Blue Island, Illinois, a southern suburb of Chicago deep in railroad roots. The PC's large order of 574 cars would become the "X72" design, which featured smooth, welded sides and commonly featured a large 6-panel Superior door. One of the purposes of this 10' high door was so forklifts could easily operate in and out of the car. The following year PC placed another order for 500 X72A box cars, which were of a slightly larger design. Together, these cars served in general purpose service, making them a popular and commonly seen car all across the North American railroad system. After PC's demise in the late 70's, the cars were absorbed by Conrail, and continued plying the rails well into the 1990's. Towards the latter part of that decade, Conrail would sell off most of their X72/72A fleet to Canadian National, short lines, or scrappers. By the early to mid 2000's era, the majority of the X72 box cars had been phased out of service, but there are still a few examples that continue to roll along in Mexico and South America. The X72 and X72A were important cars during the late PC and Conrail eras and wore many paint variations right up until the end of their service lives. One of the most famous schemes this car might have worn was Conrail's "Buy And Hold US Savings Bonds" scheme, complete with red white and blue stars clustered over the door. Because of the vast network of cars Conrail owned, a few cars escaped the paint booth and continued to roll in PC green for many years. Whether your train only needs a few or a large block on a manifest, headed back to the warehouse, the X72 will look great in any of the schemes Atlas has to offer.

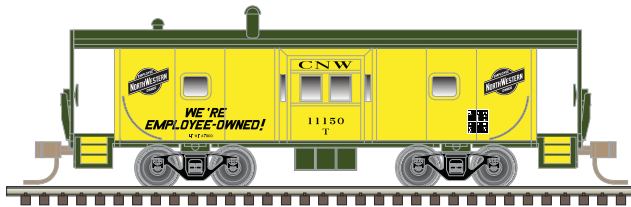

MASTER MODEL FEATURES:

- Crisp painting and printing
- Durable body
- Free rolling trucks
- Detailed brakewheel
- Knuckle couplers

PROTOTYPE INFORMATION:

The caboose has long been a staple of American railroading. Typically positioned at the rear of the train, the caboose acted as a place for the conductor and rear brakeman to monitor the train as well as bunking at the ends of long runs. Many crews would decorate the insides of their assigned caboose for a personalized atmosphere. While the most common design was the "cupola" caboose, which had a windowed extension projected above the roof of the car, it also was not immune from clearance issues. For railroads that desired a caboose that could clear low heights, tunnels, and any other obstructions, they turned to a new design called the "bay window" caboose. The carbodies were virtually similar except for a bay windowed protrusion on the sides of the car. The International Steel Bay Window caboose is based off of a popular design and features multiple bay variations, which includes a solid window, double window, and a shortened bay. This popular caboose will fit right in, acting as crew quarters for long distance runs, a place for the conductor to safely stand while your local makes a reverse shove, or even a part of excursion service.

MASTER MODEL FEATURES:

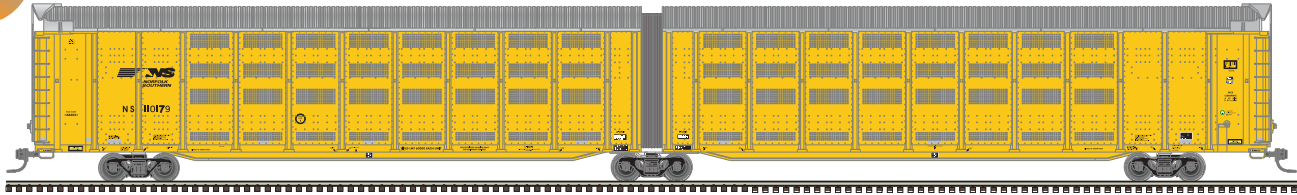

- Crisp painting and lettering
- 3 Different Bay Window Styles per prototype
- Free Rolling Trucks
- Ready-to-run
- Magnetic Knuckle Couplers

PROTOTYPE INFORMATION:

In the mid 1970's, FMC set out to produce a box car, suitable for IPD and Railbox. The product they designed was the 5,077 cubic-foot box car, with 10 foot doors, X-panelling on the roof and corrugated ends. FMC designed and built a car that was meant to withstand the test of time. The first customer to purchase these cars was SSI Rail Corp, for IPD leasing. They purchased the single and double door designs, which still see service today, many for second and third-hand leasing corporations. The Western Pacific was the only Class I operation to purchase the double door 5077. Wearing a few different paint schemes for WP, UP and later leasing operations. The Atlas Master® FMC 5077 Double Door Box Car captures the fine details, while showing the ruggedness of the design. From the X-Panelling on the roof to the signature FMC sidesills, this is a must have car on any layout.

MASTER MODEL FEATURES:

- Double Sliding Door
- Multiple body styles
- Body mounted couplers
- Plate B Box Car
- X-Panel Roof

AccuMate® couplers are made under license from AccuRail, Inc.

PROTOTYPE INFORMATION:

Introduced in 1989, the 53' style container has become a domestic standard in the shipping industry. With a larger capacity than 45' and 40' containers, it allows shippers to combine shipments into fewer containers. The Atlas 53' container is based off of a popular prototype.

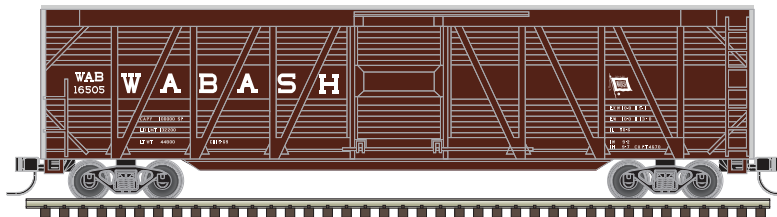

MASTER MODEL FEATURES:

- Side corrugations with an 8-55-8 arrangement
- Front wall with 10 vertical corrugations
- Roof with 6-54-6 corrugations
- 1-3-1 beveled doors
- Placard holders on front wall, sides and door
- Each set comes as a 3-pack w/different road numbers

PROTOTYPE INFORMATION:

Transportation of livestock "on the hoof" from ranches to centralized processing centers was an important part of railroading from the 1800s through the 1960s, and many different freight car designs were employed. While cattle and large animals required the full open space of a standard boxcar, smaller animals such as sheep and hogs could effectively be transported in multi-deck cars, doubling (or tripling) the capacity per car while keeping the dimensions the same. While removable decks were available to fit in a standard 40 foot cattle car, purpose-built multi-deck cars of 50 feet or more were designed for high volume suppliers, especially in the pork industry. The Atlas Trainman 50' Stock car incorporates many of the design elements of these double-deck cars that found use not only with major carriers, but which also found a home amongst the independent traveling circus trains of the 50s-70s.

TRAINMAN MODEL FEATURES:

- Colorful Painting and Printing
- Equipped with AccuMate® operating knuckle couplers

AccuMate® couplers are made under license from AccuRail, Inc.

Norfolk Southern "Operation Lifesaver"

New Road Numbers

Boston & Maine

PROTOTYPE INFORMATION:

The GP40-2 was EMD's follow-up to the very successful GP40 locomotive model. While many internal upgrades were introduced (such as the use of improved, modular Dash 2 electrical components), there were some external differences between the early production GP40-2 and late-production GP40. This included an engine water-level sight glass on the right side of the body (a feature common to all EMD Dash 2 models), a larger electrical cabinet air filter box, a lengthened battery compartment on the left side, and a slightly modified cab.

All GP40-2s featured a 16-cylinder EMD 645-series diesel engine which was rated at 3,000 horsepower. Early to mid-production phase 2 GP40-2s were built from mid-1976 through late-1979. Several major spotting features of Phase 2 units include: an 88" low nose, corrugated radiator grilles and notched step wells.

MASTER MODEL FEATURES:

- Golden-white LEDs
- Realistic die-cast underframe
- Five-pole skewed armature motor with dual flywheels for optimum performance at all speeds
- Directional lighting
- Factory-equipped with AccuMate® knuckle couplers

- Detailed cab interior with crew
- Separately-installed scale windshield wipers, metal grab irons and fine scale handrails
- Movable drop steps
- Walkway safety tread
- Coupler cut bars
- Multiple unit hoses and trainline hoses
- Snowplow

ADDITIONAL FEATURES INCLUDE:

- Etched metal radiator and dynamic brake fans (included where appropriate per road name).
- Dynamic Brake options: standard range, extended range or non-dynamic brake hatch used where appropriate per road name.
- 2,600, 3,000 and 3,600 gallon fuel tank where appropriate by road name.

Silver Sound Ready™
Easy conversion to sound

ANALOG (DC) OPERATION FEATURES:

- Please note that the Atlas Quantum Engineer will NOT operate an Atlas Gold Series locomotive equipped with a LokSound Select decoder on an analog (DC) layout. However, the sound and lighting functions of the LokSound Select decoder in the Atlas Gold Series GP40-2 locomotive can be controlled by an easy-to-use basic DCC system
- Also note that on a DC-powered layout, a DCC and sound equipped locomotive (such as the Atlas Gold Series GP40-2) CANNOT be consisted with another locomotive that does not also have both DCC and sound. (This statement does NOT apply to DCC-equipped locomotives operating on a DCC layout.)

UNDECORATED UNITS INCLUDE:

- Dynamic Brake Part: standard range and non-dynamic brake hatch
- Hood and frame bells included
- 3,600 and 2,600 Gallon fuel tanks included
- Trucks: Blomberg Type-M only
- The handrails will NOT be attached to the frame and will be packed separately.

SOUND FUNCTIONALITY FEATURES (GOLD MODELS ONLY):

Over 20 sound effects are available, including engine start-up and shutdown, prime mover sounds through all eight notches, bell, air horn, air compressor, dynamic brakes and more. There are 16 user-selectable horns, 2 user-selectable bells, and 2 user-selectable synchronized brake squeals. Manual and Automatic Notching modes with the ability to change modes "on the fly" are provided for true realism.

AccuMate® couplers are made under license from AccuRail, Inc.

DCC OPERATION FEATURES:

- Supports all DCC-programming modes
- Flexible mapping of function keys F0 to F28.
- A total of six DCC function outputs are available
- Follows all NMRA DCC standards and recommended practices.

New Haven (Post McGinnis/594)

Jersey Central

Rock Island (H15-44)

PROTOTYPE INFORMATION:

In the late 1940s, the design team at Fairbanks-Morse (FM) set out to develop an 8-cylinder 1,500-horsepower all-purpose road switcher using their opposed-piston diesel engine design. By September 1947 FM had produced the first H15-44 locomotive in the form of Demonstrator "FM 1500". The hood-unit style body included distinctive features such as slightly sloped ends, rounded corners, oval cab-side windows and a raised, rounded headlight base on each end.

The first purchaser of the H15-44 was Monon, who quickly bought both the demonstrator and the second unit built in December 1947.

Three units were then built for Rio Grande before additional demonstrators were reproduced later in 1948. Before production ended in mid-1949, a total of 35 units had been built, with Jersey Central owning the most units (14 total).

New Road Numbers

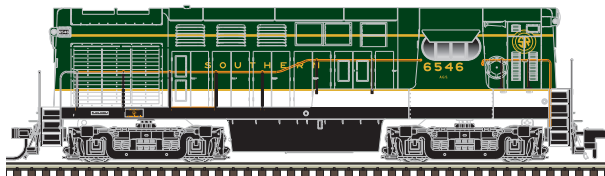

Milwaukee Road

Long Island (Dashing Dan)

Pennsylvania

Southern (AGS)

Union Pacific (H15-44)

PROTOTYPE INFORMATION (Continued):

By 1950 other builders had increased the horsepower of their competing road switchers, and FM responded with the 8-cylinder 1,600-horsepower H16-44 model. The earliest units were externally very similar to the previous H15-44. MKT 1591 was initially ordered as an H15-44, but was upgraded to 1,600hp during production.

The first true production H16-44s were ordered by Jersey Central. Several large railroads purchased this model, including Santa Fe, New York Central, Southern and Pennsylvania. A total of 99 units would be produced before production of the "phase I" version ended in December 1952. FM continued to produce H16-44s with phase II and III body styles through 1963. Our model represents the "phase I" body style of both the H15-44 and H16-44 that was produced between 1947 and 1952. Options include FM or AAR truck side frames, high or low-mounted headlights, early or late-production phase I hoods and a removable fuel tank skirt.

Pullman (Pool)

PROTOTYPE INFORMATION:

During the heyday of long-distance passenger trains, the Pullman Company produced many different configurations of sleeper cars designed to attract all segments of the traveling public. Originally built between 1925 and 1930, Pullman Plan 3958, the 14 section sleeper, was targeted toward the budget-conscious traveler and sacrificed the individual privacy of an enclosed room for a lower fare. Featuring 14 paired seating areas which at night were converted into upper and lower berths separated from the center aisle by heavy curtains, and from the next section by a thin wall, these cars maximized the number of passengers a sleeping car could carry and could double extremely well as coach cars for daytime use. Due to their economy of operation, many of these cars lasted in US service well into the 1960s or found second lives operating on Mexican rails into the 1970s and 80s.

MASTER MODEL FEATURES:

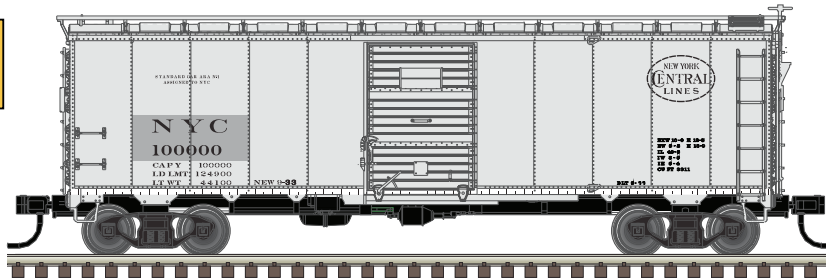

- Full interior detailing
- Scale operating diaphragms
- Prototype-appropriate Air Conditioning details
- Full, separately-applied underbody detail (brake piping, steam traps, brake rigging, etc.)
- Scale window glass
- Detailed prototypical trucks with free-rolling metal wheels
- Recommend 24" Radius Minimum
- AccuMate® couplers

AccuMate® couplers are made under license from AccuRail, Inc

PROTOTYPE INFORMATION:

A goal of the American Railway Association (ARA) in the early 1920s was to produce an all-steel box car that could be recognized as a standard by the member railroads. Although the original design presented in 1923 produced in excess of 60,000 cars, it wasn't until a new design was presented in 1932 that the member railroads gave their approval.

After extensively testing five prototypes in 1933, over 14,500 cars were produced for twenty-three railroads throughout the following decade. This design soon evolved into the 1937, Modified 1937, and Postwar AAR box cars.

Although not the most popular design produced, numerically speaking, the 1932 ARA Standard box car is considered one of the most important designs in railroad history.

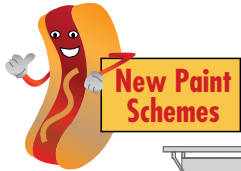

MASTER MODEL FEATURES:

- Accurate painting and printing
- Friction-bearing trucks

PROTOTYPE INFORMATION:

A joint effort from General American and Evans Products, these AAR class bunkerless refrigerator cars were produced beginning in the early 1950s. Featuring two large horizontal panels flanking a 7'7" door, these cars had a very unique appearance due to the horizontal rivet strip that joined the panels. With fewer seams than a standard box car, these cars were supposed to be less prone to rust and leakage. By 1959, over 1,000 of these boxcars were produced.

MASTER MODEL FEATURES:

- 8' plug with separate latch bars
- Overhanging diagonal panel roofs
- Accurate postwar ends
- Accurate painting and printing

AccuMate® couplers are made under license from AccuRail, Inc.

PROTOTYPE INFORMATION:

Introduced in 1961 by ACF® to haul sand, clay, salt, grain and bulk plastics, the Cylindrical Hopper was the first commercially successful tank-type covered hopper car design. A few of the more than 4,000 cars of this type built through 1966 can still be seen in service today across the United States.

AccuMate® couplers are made under license from AccuRail, Inc.

PROTOTYPE INFORMATION:

The 36' reefer is a highly detailed model of the car that was a mainstay in the meatpacking industry during the steam era. Based upon cars built by the General American Car Company for the Cudahy Packing Co. in 1925, the 36' wood reefer is representative of the thousands of cars that transported meat, dairy, beer and food products well into the 1960's.

MASTER MODEL FEATURES:

- Accurate painting and lettering
- Separately-applied grab irons, ladders and stirrups
- Two different hatch styles - road name specific
- Truss rods appropriate per road name
- Separately-applied door hardware
- Opening hatches and doors
- Die-cast chassis
- Detailed braking system
- 40-ton Bettendorf-style trucks
- AccuMate® couplers

AccuMate® couplers are made under license from AccuRail, Inc.

PROTOTYPE INFORMATION:

At the end of World War II, railroads ordered large numbers of 50' AAR boxcars with a standard design that was first widely used in the late 1940s. This design was based on the original 1937 AAR design but was modified in the post-war era to include: improved dreadnaught end and diagonal panel roofs with standard or overhanging design. These 50' boxcars were a common sight on American railroads well into the 1970s and 1980s.

MASTER MODEL FEATURES:

- Details such as separately applied ladders and grab irons
- Three different side sill styles - straight, tabbed and fishbelly
- 8' & 9' Superior or Youngstown doors
- Fully detailed underframe
- Free rolling trucks with metal wheelsets
- Accurate printing and prototypical paint schemes

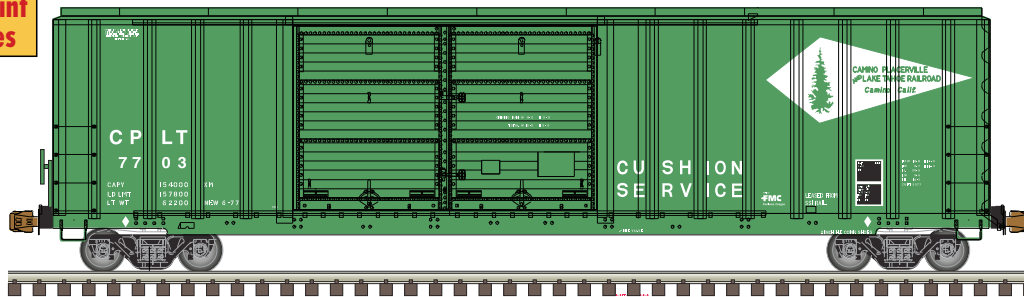

AccuMate[®] couplers are made under license from AccuRail, Inc.

PROTOTYPE INFORMATION:

In the mid 1970's, FMC set out to produce a box car, suitable for IPD and Railbox. The product they designed was the 5,077 cubic-foot box car, with 10 foot doors, X-panelling on the roof and corrugated ends. FMC designed and built a car that was meant to withstand the test of time. The first customer to purchase these cars was SSI Rail Corp, for IPD leasing. They purchased the single and double door designs, which still see service today, many for second and third-hand leasing corporations. The Western Pacific was the only Class I operation to purchase the double door 5077. Wearing a few different paint schemes for WP, UP and later leasing operations. The Atlas Master® FMC 5077 Double Door Box Car captures the fine details, while showing the ruggedness of the design. From the X-Panelling on the roof to the signature FMC sidesills, this is a must have car on any layout.

MASTER MODEL FEATURES:

- Double Sliding Doors
- Wire grabs
- Etched parts
- Plate C Box Car
- X-Panel Roof

AccuMate® couplers are made under license from AccuRail, Inc.

Based off of a Pullman-Standard design, the Comet II was the successor to these very popular commuter cars. Purchased in large quantities by multiple commuter agencies, their sleek yet modern design features two end doors, built for high and low level platforms, along with bathrooms and Head-End (HEP) A/C and heating. Around the same time, their cousins, the Horizon fleet, was built for longer distance services for AMTRAK. These cars feature 2x2 seating and separate cars for food and beverage services.

Four road numbers available per road name.*

PROTOTYPE INFORMATION:

In 1923, the ARA (American Railway Association) proposed a standard design all-steel box car for the railroads. While the design was certainly a good one, the car never became a recommended practice due to questions of the selected inside width. Nonetheless, quite a few railroads opted for the design and rostered sizeable fleets. The largest group of cars, by far, was class X-29 of the Pennsylvania Railroad.

MASTER MODEL FEATURES:

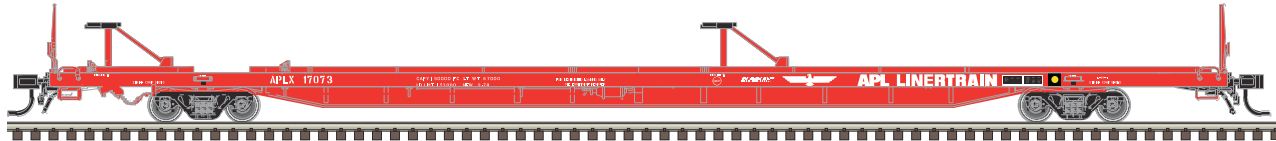

- Highly detailed ABS body
- Die-cast chassis
- Flat or corrugated ends are per the prototype
- Detail variations as appropriate for each version
- Different door styles
- All metal separately-applied grab irons, ladders and stirrups
- Accurate painting and lettering
- Minimum diameter curve: O-31 (3-Rail)
- Minimum radius curve: 24" (2-Rail)
- Some assembly required for undecorated models.

Four road numbers available per road name.

PROTOTYPE INFORMATION:

One of the backbone cars of our country's Intermodal service fleet, Atlas O's model accurately portrays the prototype. Based upon ACF® cars built throughout the late 1960s and 1970s, these cars are in continuous operation today.

Available in 2-rail as well as 3-rail, these ready-to-run flat cars have state-of-the-art detailing and construction.

MASTER MODEL FEATURES:

- Die-cast construction with etched metal and ABS details
- Separately applied brake system details
- Accurate painting and lettering
- Provides excellent tracking, even at the front of a train
- Designed to work with the Atlas O 45' Pines Trailers (available separately), but can accept other manufacturer's trailers as well
- Die-cast couplers with added trainline details (3-rail)
- Die-cast scale couplers with internally sprung knuckles (2-rail)
- Scale 33" turned brass wheels (2-rail)
- Overall length: 22 1/4"
- Minimum diameter curve: O-72 (3-rail)
- Minimum curve: 36" radius (2-rail)

6-Bay Cylindrical Hopper

Great Northern (Grain Loading)

Illinois Terminal

MASTER MODEL FEATURES:

- Accurate painting and lettering
- Spring die-cast 100-ton roller-bearing trucks with rotating bearing caps
- Opening hatches
- True 1/4" dimensions and details
- Realistic see through roof walks
- Separately-applied grab irons
- Separately-applied brake detail
- Die-cast articulated couplers (3-rail)
- 3 Bay Minimum radius curve: O-31 (3-rail)
- 6 Bay Minimum radius curve: O-42 (3-rail)

Two road numbers available per road name.

PROTOTYPE INFORMATION:

Introduced in 1961 by ACF® to haul sand, clay, salt, grain and bulk plastics, the Cylindrical Hopper was the first commercially successful tank-type covered hopper car design. A few of the more than 4,000 cars of this type built through 1966 can still be seen in service today across the United States.

Available in 2-rail as well as 3-rail, these ready-to-run hoppers have state-of-the-art detailing and construction.

† Alternate History Paint Scheme

Two road numbers available per road name.

PROTOTYPE INFORMATION:

Built in 1997 by Thrall for TTX, the Articulated Auto Carriers were designed to haul new trucks, vans or SUVs from assembly plants and distribution facilities to dealer lots. Fully assembled and ready-to-run, Atlas O's true 1/4" scale models stretch at a whopping 35" in length and are packed with many realistic details.

Available in 2-rail as well as 3-rail, these ready-to-run cars have state-of-the-art detailing and construction.

MASTER MODEL FEATURES:

- True 1/4" scale details and dimensions
- Die-cast chassis
- Operating end doors
- Interior deck
- Articulated diaphragm with three curvature settings (0-42, 0-54, 0-63+)
- Separately-applied wire grab irons
- 70-ton roller-bearing trucks properly located on chassis
- Full brake line details as per the prototype
- Minimum diameter curve: 42" (3-Rail)
- Minimum radius curve: 36" (2-Rail)

TOTAL PIECES ORDERED			

Two road numbers available per road name.

PROTOTYPE INFORMATION:

At one time, the express refrigerator car was a common component of the nation's passenger trains. These cars provided fast delivery of perishable, high value crops and goods that demanded the speediest service the railroads could deliver. Since many of the cars were equipped with collapsible ice bunker bulkheads, the cars could double in mail and express package service. The General American 53' 6" Wood Express Refrigerator cars were among the most common cars of this type used in the US. Not only were they used by many class 1 railroads in express mail and passenger service, they were perhaps best known in the liveries of the express companies, such as American Railway Express and Railway Express Agency.

Available in 2-rail as well as 3-rail, these ready-to-run reefers have state-of-the-art detailing and construction.

MASTER MODEL FEATURES:

- Sprung die-cast GSC Commonwealth express car trucks
- All metal ladders, stirrups and grab irons
- Detailed underframe
- Opening doors and roof hatches
- Accurate painting and lettering
- Approximate length: 13.5"
- Minimum radius curve (2-Rail): 36"
- Minimum diameter curve (3-Rail): 0-36"
