11 462 H0 Railroad maintenance with ramp

The Railroad maintenance provides office and recreational space for the track inspector, trackwalkers and railway workers. It also houses the materials and tools required for daily maintenance of a particular section of track. The model consists of offices and a garage. Small vehicles can be parked under the lean-to roof at the rear. The pole rack can be used to store items such as new posts for signal boards. Vehicles can be loaded onto flat cars via an end-loading ramp constructed of old sleepers.

Available from 03/2021

172 x 150 x 74 mm / 112 x 30 x 20 mm

41 669 H0 Multicar M22, Railroad maintenance

The Multicar M22 with hoop cover is a good addition to the railroad maintenance. With its orange colouring and the DR logo printed on the door, as well as the inscription "Bahnmeisterei", it is ready to transport anything. In our case, it is bringing hot food to the railway construction site in food pails (included).

Loader T172,
Railroad maintenance**

The T172 was built from 1961 to 1967. A further development of the T170, it came with a 17 HP motor, two-speed gearbox, a new hydraulically operated boom constructed of sheet metal and dual tyres on the rear axle. The delicate, intricately printed kit conveys the ideal of a track inspector's house. A steerable front axle, the ability to rotate 360° and a variable-angle boom that can be fitted with a hook, rake grapple or clamshell bucket make it possible to create all kinds of authentic scenes. It can even be loaded onto a flat car, using the included single tyres on the drive axle.

**41 670 H0
Railway construction set**

The railway construction set, with its extensive assortment of tools and materials, is the perfect addition to the track inspector's house. The small crew car transports the power generator and distributor for the two spike drivers. A delicate electric screwdriver, two rack-and-pinion jacks, rail and sleeper tongs, socket spanners, fishplate spanners and crowbars round off the kit. The included standard sleeper screws, railway tie plates, fishplates and individual wooden sleepers help to create more realistic railway construction scenes. Two safety signal boards can be mounted on the track to ensure the necessary safety.

11 463 H0
Schmidt Street 31/33

The Schmidt Street buildings have been a staple of many model train sets for years. Now the street is getting another extension. A suggestion from an Auhagen seminar attendee prompted the creation of a building with a shoe store. The interior of the store and the curved show windows of the entrance are real eye-catchers, and the grey roof provides a bit of variety in Schmidt Street. The second building is being rehabilitated. The window panes are painted with white crosses for safety, to show that the panes are in there! Carpenters are working on the roof truss, while material is being hoisted up to them by cable. The kit includes a number of construction accessories: wood pile, brackets, windows, all manner of tools and a gravel chute made of thick timber planks. Warning triangles are printed on the construction trailer model.

11 464 H0
Schmidt Street 35/37

These two new buildings extend Schmidt Street and turn it into a real promenade that invites people to window shop. The inclusion of a whisky shop in one of the buildings is no accident. Here as well, the idea came from seminar attendees, who in this case were also whisky connoisseurs. Tobacco products make a fitting complement to the spirits on offer. The roof is decked with steel plates. The neighbouring building still shows war damage, with the two upper floors missing and a temporary flat roof. An interesting feature is the tall chimney, held up by a metal frame and supports. The ground floor serves as a receiving area for secondary raw materials. Available from 09/2021

13 347 TT
Railwayman's house
with side building

The residence for a railwayman and his family has a Saxon design, but would be at home in many regions of Germany. The living spaces on the ground floor are small, and the rooms under the roof are very low. One gable wall of the house is clad with grey slate. The side building is used for office and business space. The signal bell, which sounds when the trains pass, gives the whole ensemble an added touch of realism. Authentic historical model

Multicar M24-0 with
box body

The M24-0, successor to the Multicar M22, was manufactured by VEB Fahrzeugwerk Waltershausen from 1974. With significantly more power (45 HP), the small truck could reach speeds of 50 km/h. At first only available with a driver seat, the M24-0 got a passenger seat in 1977. Many superstructures were developed for the vehicle, including a rotating ladder, a dump body, a flat bed with loading aid and many more. The finely detailed and printed model is fitted with a box body. Authentic historical model

Multicar M22
with waste collection tank

Various versions of the Multicar M22 were made by VEB Fahrzeugwerk Waltershausen between 1964 and 1974. This design was primarily used to dispose of small amounts of waste, for example from waste bins. With realistic tyres, mirrors and trailer coupling. The filling hatches can be depicted as open or closed.

14 487

14 487 N Wagon weighbridge

Wagon weighbridges are used to weigh individual goods wagons. They are usually installed and permanently integrated near loading sidings. Goods wagons are generally weighed before and after loading and unloading. The difference between the measurements is then the weight of the load. The model for N tracks without a built-in trackbed features a scale house made of corrugated sheet metal, which can be heated on cold days.

Landscaping panels – test set

Landscaping panels and modelling tools for creating a small diorama or area for your model railway system. This very lightweight foam is ideal for modelling. It is easy to work with and resistant to heat, so it is also very good for working with hot glue. The Auhagen modelling tool for working with the panels is enclosed. Modelling set No. 78 500 works well with this.

90 001 Cutting mat

The Auhagen cutting mat is ideal for working with cutting knives No. 90 003 or modelling knives, No. 90 005. Its structure of three different solid layers makes the mat practically indestructible. The surface "heals" after each cut, so when you make the next cut, the cutting tool does not slip into an old groove and cause an untidy cut.

The centimetre-spaced square grid printed on the mat makes it easier to lay out components and to trim to recurrent dimensions. The dimensions of the mat mean it is large enough to be able to work comfortably.

The cutting mat is suitable for cutting paper and card, as well as Auhagen plastic panels. It is also an ideal base when trimming sprue from small parts with the cutting knife.

10/2020

90 002 Steel ruler

This steel ruler is a versatile tool for modelling, especially with its length of 30 centimetres. The zero point of the scale is exactly at the end of the ruler. The millimetre and half-millimetre scales as well as the numbers are etched in, so they are undamaged by cleaning.

The steel ruler is used not only for precise measuring in modelling, but also as a guide when cutting with the cutting knife No. 90 003 or the modelling knife No. 90 005.

Available from 10/2020

Length 300 mm

90 003 Cutting knife

The rugged metal design of this cutting knife is particularly suitable for precisely cutting Auhagen plastic panels. Paper and card can also be cut with great precision.

The pointed 30° snap-off blade is well suited for modelling work. In general, all 9 mm blades fit the knife.

When the cutting edge becomes blunt, it can be removed using the breaking-off tool located in the end of the handle. A pack of ten 30° replacement blades is included.

Further replacement blades are available using No. 90 004.

Available from 10/2020

90 004

in stock
10/2020

90 009 All-purpose scissors

A good pair of scissors belongs in every modelling workshop, and these particularly rugged scissors are very versatile. They have a long cutting area, permitting long, straight cuts to be made with ease. The blades are milled, making it easy to cut thicker materials because the material does not slip.

The scissors are suitable for paper and card, but they can also cut thinner plastic panels and even sheets of brass, nickel silver and copper up to a thickness of 0.3 mm.

A separable cross joint means the scissors can be dismantled for thorough cleaning without a tool. The cutting edges can be readjusted using an adjusting nut.

Available from 10/2020

**90 005
Modelling knife**

With its non-slip handle, this high-quality modelling scalpel sits well and securely in the hand. In modelling, it is used for cutting paper, card and thin metal foils. The tough but flexible blade makes the knife also very well suited for the precise cutting of Auhagen plastic panels. The blade is easily replaced, using the Allen key in the protective cap to loosen and re-tighten the securing screw on the blade holder. Two versions of replacement blades are available: pointed (No. 90 007) and rounded/short (No. 90 006).
Available from 10/2020

**90 010
Plastic side cutter**

This side cutter is ideal for trimming sprue from components. The smooth cutting edge cuts without a bevel, leaving no residue on the component. The rugged design means that even thicker parts can be cut. The pointed format of the cutting edges means that even the smallest parts can be cut off without damage to them. The return spring and the non-slip plastic handles guarantee comfortable working.
Available from 10/2020

**90 006
Replacement blades for modelling knife – rounded/short**

10 replacement blades (rounded/short) for the precision knife No. 90 005. These very tough yet flexible knife blades are especially good for use in modelling. The special dispenser box allows the safe removal of individual blades.
Available from 10/2020

**90 007
Replacement blades for modelling knife – pointed**

10 replacement blades (pointed) for the precision knife No. 90 005. These very tough yet flexible knife blades are especially good for use in modelling. The special dispenser box allows the safe removal of individual blades.
Available from 10/2020

**90 008
Tweezers**

These pointed tweezers are manufactured from high-grade steel and have a matt lacquer in the grip area. The tips are ground flat on the inside and close very precisely, even after prolonged use. The tweezers make child's play of picking up and precisely positioning even the smallest components. A plastic cap to protect the tips and prevent accidents is included.
Available from 10/2020

90 011

ALREADY
in stock
10/2020**90 011**
Reamer set

This special tool belongs in every modelling workshop. It is used for enlarging drilled holes measuring in the range of tenths of a millimetre. It can also be used on holes that are not completely round, such as when there are small burrs or paint residues in the drilled hole. Holes can sometimes also be sealed with a thin layer of paint after painting. This can then be punctured and the hole enlarged.

The cutting edges and flutes run straight along the axis of the reamer, and reamers are tapered to be thinner toward the front. The cutting edge of the awl ends just before the handle, and the diameter of the shank is then of the desired size. Reamers are not suitable for drilling.

The pack contains 6 reamers in sizes from 0.6 mm to 2.0 mm.

Available from 10/2020

10/2020**90 013**
Modelling files

These simple files have a hard cardboard core and two differently grained sides – the red side is coarser than the yellow one. They are particularly suitable for the deburring and finishing of components, making it very easy to remove residual material still remaining on components after the removal of sprue, for example.

The modelling files are of a sufficient length to work with Auhagen plastic panels.

Pack of 10

Hand-drill set

41-piece drill set with hand borer for plastic, wood and metal. Modelling often requires very fine holes to be drilled. The hand-drill set provides you with a wide selection of very thin drill bits. The diameters range from 0.6 mm to 2.5 mm in 0.1 mm increments.

The drill holder sits well in the hand and ensures precise working. There are two different clamping jaws to be selected depending on the size of the drill bit used.

Since the fine drill bits can break even when carefully used, the rugged and durable packaging contains duplicates of each size.

Available from 10/2020
