The Guide to Building a Family Model Railway

Enjoy Modelling with the Whole Family!

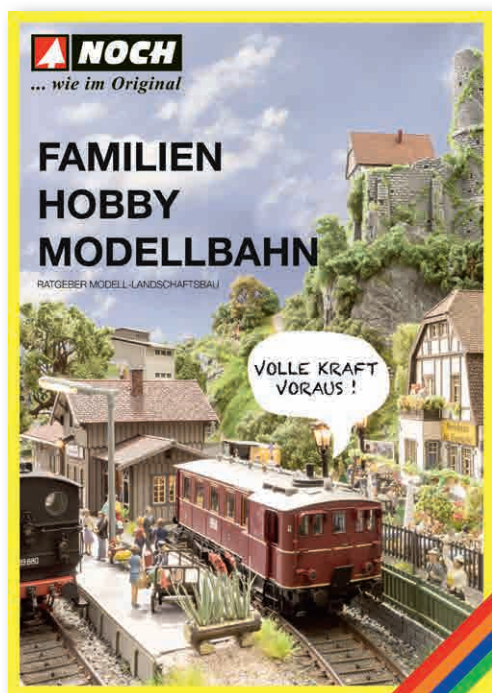

Guidebook »A Family Hobby - Model Railway«

Create an amazing model railway layout as a family together with your children. Isn't it an exciting idea? The children will be certainly very keen to do it. But how could you make the idea a reality? Our author, the well known modeler, Karl Gebele, has built together with his grandchildren Nico and Denis an attractive 1.90 x 1.00 m layout guaranteeing the pleasure of play. In the Guidebook »A Family Hobby - Model Railway«, Karl Gebele explains on over 120 pages the step by step creation of this wonderful family project (for contents, please see the table on the right). It will focus on where children can play a part in the layout's construction

and which working steps are better carried out by adults.

At the end of this Guidebook you will find a list of the items used and the track plans for the assembly of the layout with MÄRKLIN® C track H0, MÄRKLIN® K track H0, Roco® geoLINE track H0, Fleischmann® Profi track H0 and Fleischmann® piccolo track N, PIKO® A track H0 and Tillig® TT track allowing you to build your layout with your preferred track system.

Expected release: April 2016

Here Comes the Sound!

Sound Scenes

Add life to your model landscape!

Thanks to the compact construction of the electronic components and the loudspeakers of the NOCH Sound Scenes, the noise is reproduced where it originally comes from.

Thus, the ready-for-connection electronics can be installed in churches or the street musician module can be placed directly in a building next to the band. You will be surprised by the realistic sound reproduced in the centre of the action. The sound is released by a preinstalled button.

The connection is made via a usual 16 V transformer, suitable for AC/DC.

Head of Modelling

Ordering every figure individually is ideal for choosing the perfect figure for a specific scene. And such great value, too.

We are more than 500!
Discover the variety on
www.modellfiguren.de

Wow, They are Huge!

Tall PROFI-Trees

Did you know that birches can grow up to 30 meters and lime trees up to 40 m? A birch tree then would be up to 34 cm high in H0 gauge, and a lime tree up to 50 cm. This would be a bit too high for us. However, we do understand that it would be good to also have some beautiful, tall solitary trees on a wonderful layout. For that reason, NOCH now offers tall and impressive Birch Trees, Lime Trees, Oak Trees and Chestnut Trees.

Expected release: March 2016

Deep Forests – High Treetops!

PROFI Fir Trees and Spruces

The new high-quality PROFI Fir Trees and Spruces are ideal for creating an impressive dense forest in the blink of an eye. Thanks to our high-quality flocking with extra long fibres, the trees have a very realistic finish. The trees are available in two different shades of green and can be easily planted into your model landscape thanks to the wired feet.

Expected release: September 2016

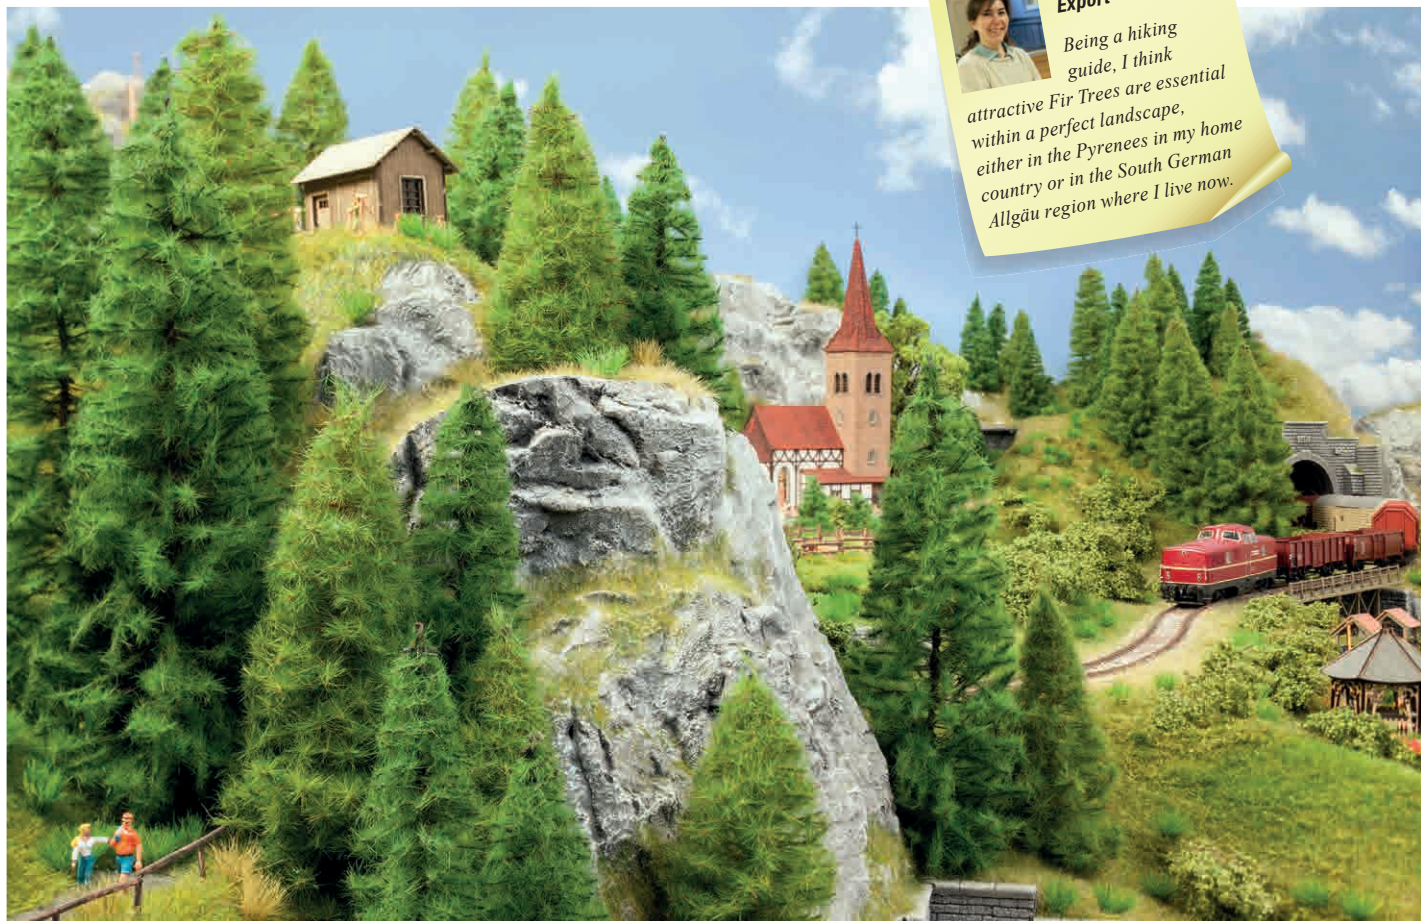

Info-Tip: Shape Trees Individually

The trunk of the PROFI Fir Trees and Spruces is made of metal wire, allowing you to shape the tree according to your imagination. Particularly realistic fir trees can be achieved by forming the branches manually.

Montserrat Garcia Export

Being a hiking guide, I think attractive Fir Trees are essential within a perfect landscape, either in the Pyrenees in my home country or in the South German Allgäu region where I live now.

Let's Stick Together!

Fine Application Laser-Cut Adhesive

The NOCH Laser-Cut Adhesive is ideal for the construction of high-quality Laser-Cut building kits. Thanks to the precision point the glue is easily dispensed and even the smallest parts can be properly glued. For bigger surfaces, it is advisable to apply the adhesive with a brush. The special formula guarantees long and strong adhesion.

Expected release: April 2016

Ralf Schulz
Manager Laser-Cut
Department

The precision Laser-Cut Adhesive with its fine point and glueing qualities is the ideal adhesive for our Laser-Cut products.

61104 Laser-Cut Adhesive
30 g

Latex Adhesive for Cork & More

The NOCH Latex Adhesive is a viscous glue with large coverage. The milky-white adhesive emulsion can be applied directly with the dispenser bottle on cork, wood, rubber, felt, cardboard and fabric. The latex adhesive is perfectly used to stick NOCH Cork Trackbeds. The non-toxic adhesive is also ideal for glueing tracks, giving you some sound-absorbance and allowing you to fix the ballast at the same time.

Expected release: April 2016

The Church Bells Ring among the Stars!

Laser-Cut Kit Church »St. George« with micro-sound Bells Ringing

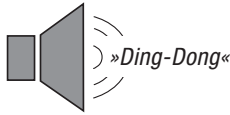

The lovely church of »St. George« is characterized by the harmonious architecture, the beautiful half-timber structure and charming details. The model is consciously kept small, to allow the church to be installed within a village or as an individual building in a rural area. The bell ringing is saved on an electronic chip. The complete sound electronics including the loudspeaker and LEDs are assembled ready-to-connect. The connection is made via a usual 16 V transformer, suitable for AC/DC.

Expected release: November 2016

Football Pitch with Clubhouse, micro-sound Stand and Floodlights

In 2016 the European Football Championship will take place again - an important sports event! However, the real heroes play on training pitches of their clubs every weekend and the real fans come together in their clubhouses to cheer on their local team. Whether in villages or towns, the football clubs are an integral part of our society.

In order to reproduce these scenes in miniature, NOCH presents a small training pitch with clubhouse and plenty of accessories as a New Items Highlight for this year. The clubhouse and the stand are high-quality Laser-Cut kits. Also the goal and the corner flags are laser-cut models and can be placed on the electrostatically flocked grass mat being marked with lines. The completely ready-to-connect micro-sound electronics and four floodlights with each two LEDs feature the model to be an acoustic and visual highlight.

To get started immediately with full energy, two football teams are included in the kit as well as a decoration sheet with the matching stadium perimeter advertising.

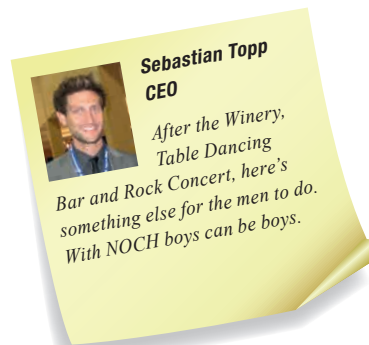

The connection is made via a usual 16 V transformer, suitable for AC/DC.

This model is a limited special edition of just 1000 pieces and includes a numbered certificate, a detailed instruction manual as well as special adhesive.

Expected release: November 2016

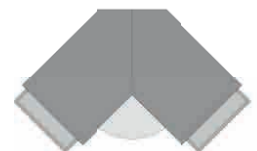

Contents:

- Grass Mat »Football Pitch«, with printed lines
- Laser-Cut kit Clubhouse
- Laser-Cut kit Stand
- Micro-sound »Football« with fan chants and goal celebration, ready-to-connect electronics with loudspeaker
- 2 Football Goals and 4 Corner Flags
- 4 Floodlights with each 2 LEDs, ready-to-connect
- 2 Football Teams including 11 footballers each
- Decoration sheet for stadium perimeter advertising
- Limited edition of 1000 pieces

Info Tip: Decoration of the Football Pitch

This set contains one stand. If you are expecting more fans, you are able to purchase the Laser-Cut minis kit Stand (ref. 14398) separately (please see page 32). On the pages 6 and 7 you find the matching figures for the decoration.

Clubhouse:
19.2 x 11.6 cm
8.8 cm high
Stand:

Accessories that Liven the Landscape Up!

Laser-Cut minis H0

Laser-Cut minis are ideal for creating lovely and realistic model scenes. Complementing our Focus Theme »People & Animals«, this range is expanded with dog houses, a kennel and a pigeon loft. Children spending their holiday at the farm (see page 22) are busy to explore an entire adventure playground. The carriages are especially finely detailed and are perfect for decorating the Great Farm »Franz Fuhrmann & Co.« (see page 23).

Expected release: June 2016

Discover »Fine Scale« Quality in Series!

3D minis

In 2015, NOCH launched their new 3D minis series in mass production. The special feature of these models: they are printed on a 3D printer »from scratch« and are afterwards elaborately hand painted and weathered. The result is

astounding! Fine Scale Quality in full production! This year the range is extended with interesting rail construction machines.

Info Tip:
3D Printing – This is how it works:

The 3D printing features an »additive« procedure during which a plastic material is applied in layers, one upon the other, by a printhead. Thus, layer by layer an individual model is created. 3D printing offers several advantages: Contrary to injection-moulded products, the 3D models come out of the printer completely finished and thus e.g. no assembly work is necessary. In addition to this, a very high »resolution« is achieved with the 3D printing technology, so that more delicate and more detailed models can be produced compared with injection moulding technology.

The innovative production procedure has been used in high-tech industries for several years already (especially in the medical and automotive sectors). The production is costly as the 3D printers as well as the material used are very expensive. In return, models with previously unheard of detail and realism can be created.

N RhB R150 Bernina Express

Bernina-Express

The Comfortable Way of Crossing the Alps

One of the most spectacular ways to cross the Alps: The Bernina Express from Chur / Davos / St. Moritz – Valposchiavo – Tirano links up regions with different languages and cultures. One of the highlights is the panoramic journey through the UNESCO World Heritage RhB. This is not a rack railway and the train winds its way gently through splendid scenery. Bernina Express is the third famous RhB train realized by KATO in N-gauge. From the two available sets the basic set includes the Allegra 3-car powered train with new car number and display

»Bernina Express« plus two Bernina Express coaches. The add-on set includes 4 Bernina Express coaches.

Expected release: April / May 2016

GE4/4-III Rhätische Bahn Locomotive

Since 1993, Switzerland's Rhätische Bahn has purchased nine modern high performance GE4/4 III locomotives to pull heavy passenger and freight trains on the mountain route of the canton Grisons. The first loco, no. 641 Mainfeld, was also the first advertising loco driving on the RhB railway network. Just after its completion, the loco got the lettering »Heidiland-Bernina-Express«. The Swiss flag and the edelweiss flower are the hallmark of this beautiful theme loco.

Model Features

- Minimum accessible radius: R150
- Maximum gradient: 5 %
- Size: approx. 103 x 19 x 24 mm
- Weight: approx.: 79 g
- Wheel diameter: 6.8 mm
- Operating headlights
- DCC friendly – e.g. digitization with Digitrax-Decoder Ref. 70DN63K4A (not included)

N RhB DCC-friendly GE4/4-III 641 Bernina Express

Loco no. 644 was put into operation on April 14th, 1994. The original red painting only lasted for a short period of time, because in 2013 the loco got a new yellow painting and lettering for the celebration of the 100th anniversary of LAZZARINI, one of the most popular construction services in the canton Grisons. Since then you will find the loco on the RhB railway network pulling passenger and freight trains.

Expected release: February 2016

SDP40F Phase I Amtrak

This precise scale model of SDP40F locomotive was Amtrak's first official built to order locomotive. The locomotive is the most suitable to be coupled to pull the double decker bi-level passenger cars "El Capitan" of the former Santa Fe, that was mostly operated as transcontinental train before the appearance of Superliners in 1979.

This is an indispensable locomotive for those who enjoy running N scale Amtrak models.

Model Features

- Body details with prototypical appearance "as built"
- Amtrak Phase I + II are a perfect match for the Amtrak "El Capitan" 10-Car Set and "Southwest Limited" 8-Car Set
- Equipped with body mounted KATO magnetic knuckle couplers
- Golden White LED directional headlights and illuminated pre-printed number boards
- Powerful five pole motor with all wheel electrical pickup and blackened wheels
- DCC friendly

Expected release:

Class 181.2

The Only True European Locomotive

For 40 years the BR 181.2 dominated with changing paint-schemes the international rail traffic to France and Luxemburg, reaching Stuttgart, Frankfurt (Main), Cologne, Fulda and occasionally Leipzig within Germany. The starting point for her main line was Saarbrücken (Germany) from where she drove alongside the beautiful river Mosel to Koblenz. With 160 km/h top speed she was also qualified for premium IC and EC passenger traffic, but you could find her pulling international freight

trains. Even express and local passenger trains belonged to her range of duties.
Expected release: February 2016

181 208-0, Orient-Red

This loco has a little bib on the front, below the cab; those locos which were repainted later on got a bigger bib. The 181 208-0 was consciously chosen because of her elegant and pleasing appearance and in addition it's a perfect match with its Bundesbahn (Federal Railway) lettering for

Märklins® Inter Regio cars – probably the most attractive Bundesbahn rolling stock colour scheme. The greyish-brown air grills are not only true to the original but also give a more realistic impression than the silvery design.

181 206-4, Steel-Blue

With this steel-blue loco the most attractive colour variation has been realized, which fits brilliantly to the most contemporary long-distance trains as well as to freight trains. A special characteristic of this loco, next to the 181 201, is the blue colour she kept during her complete

period of service and still keeps it today as museum-locomotive next to the »DB-Keks« (Federal Railway Logo). This allows the use of this model for era V and VI.

Model Features

- Minimum accessible radius: R145 (long coupler), R195 (short coupler)
- Maximum gradient: 4 %
- Size: approx. 81 x 14.2 x 17 mm (height incl. Pantograph 21.5 mm)
- Weight: 30 g
- Power: 0~9 V operating voltage (DC)
- Maintenance free, iron-free motor
- Coupler: not mounted, for neater appearance (in the box: Märklin® – as well as knuckle coupler)
- Light: Golden White directional LED headlights (constant lighting with Rokuhan controller)
- Pantograph: movable, not electrically functional

American Freight Traffic

EMD Model 40

The Model 40 was brought to market by Electro Motive Division in 1940. The »Critter« was about as far from the mainlines as you could get. Generating only 300 horsepower, the tiny centercab locomotives were meant for light industrial switching. Because the locomotive weighed less than 45 tons, unions agreed that it could be operated by a one man crew and didn't need a fireman.

Few diesels ever come close to getting labeled as »cute« but the Model 40 is a good contender. Reduced to 1/87th its actual size, the little engine is charming at the very least.

Expected release: September 2016

33,900-Gallon LPG Tank Car

The 33,900 gallon LPG tank car is one of the largest standard tank cars used today. While liquefied petroleum gas (LPG) and anhydrous ammonia are the two most common commodities, they are also used to transport butadiene, isoprene and gasoline. These cars can be seen regularly in mixed manifest freight trains throughout North America. They travel singly or in large blocks between producers and distributors.

20' Reefer Container

When carried by rail, containers may be carried on flatcars or well cars. The latter are specially designed for container transport, and can accommodate double-stacked containers. However the loading gauge of a rail system may restrict the modes and types of container shipment. The smaller loading gauges often found in European railroads will only accommodate single-stacked containers. In some countries, such as the United Kingdom, there are sections of the rail network through which high-cube containers cannot pass, or can pass through only on well cars.

Model Landscaping is Great Fun!

NOCH Guidebooks

Model Landscaping can be so easy as long you know how to do it! We would like to help you in successfully realizing your ideas, while enjoying the fun of modelling. Our Guidebook »St. Sebastian« has been designed for model railroaders and those who are new to the hobby. Over 120 pages, the 2.50 x 1.20 m »St. Sebastian« layout will show you step by step, starting from the planning up the finished layout, how to

create your own model railroad landscape. You will find more information about the »St. Sebastian« Guidebook in our catalogue or at www.noch.com. The new Guidebook »A Family Hobby - Model Railway« has been created to introduce modelling to families. Build your own beautiful railroad layout together with your children or grandchildren. Learn more about this Guidebook on page 2 of this New Items leaflet.

71904 Guidebook »Familien-Hobby Modellbahn«
German, 120 pages

71905 Guidebook »A Family Hobby - Model Railway«
