with integrated
infrared receiver

NEW ITEMS 2005

Intellibox-IR

Intellibox with integrated
Infrared Receiver

Mini-Drive motors

For DC, AC and digital
function outputs

76 400

Multi-protocol decoder with
load regulation for DC
motors, SUSI Sound and
LISSY interface connectors

Sound decoder

Multi-protocol decoder with
load regulation for H0-DC
motors, IntelliSound and
LISSY connectors

LISSY Mini-transmitter

For connection to a
locomotive and
Sounddecoder
with LISSY-interface

LocoNet installable display

For displaying LISSY
Information on the control
panel

INTELLIBOX-IR WITH INFRARED RECEIVER

- With integrated infrared Receiver for the IRIS remote control
- Included in upgrade to Software version 2.0

Operate your Intellibox easily with the IRIS remote control without any extras, because the infrared receiver for the IRIS remote control is now built into the Intellibox. If more than one receiver should be needed because of the room layout, then two external infrared receivers (Part No. 66 520) can be attached to the Intellibox.

The Intellibox upgrade to software-Version 2.0 is available to you free, as soon as it becomes available. Version 2.0 of the system software supports 12 special functions for DCC decoders, locomotive selection from during refresh cycle is possible and the selected locomotive addresses can be stored when the unit is switched off, so that they are immediately available after switching on.

TECHNICAL DATA

max. Current load 3 A
on the I²C Bus up to 1 A
on LocoNet output up to 0.5 A

Part No. 65 050 Intellibox-IR

Deliverable from March 2005.

INFO Intellibox THE MULTI-PROTOCOL DIGITAL SYSTEM

A single unit offers all digital control functions needed on your model railway layout. The Intellibox is independent of the track system or decoder format. It controls most manufacturer's decoders and data formats.

And all mixed at the same time!

OUR STANDARD SETS A NEW BASE LINE

- Independent of track system
- Simultaneous Motorola, DCC, Selectrix
- Up to 128 speed steps
- Up to 9999 Decoder addresses
- Virtual Locomotive addresses
- Multi-traction with up to 4 locomotives
- Switching of turnouts and signals
- Switching of routes
- Multilingual user interface
- Integrated computer interface
- Possible to connect many devices
- Programming of decoders with different data formats
- Free system software updates
- Simplest operation

ALL IN ONE BOX

With the Intellibox you are fully equipped for digital operation. A single device puts the functions of central processing unit, booster, speed controller, keyboard, route control, s88-Monitor, Programmer, computer interface and an infrared receiver at your disposal.

You can use the Intellibox on 2-rail or 3-rail layouts. You can use locomotive, function, turnout and switching decoders simultaneously in Motorola, DCC and Selectrix format from most manufacturers.

CONNECT WHAT YOU LIKE

The Intellibox can be connected with a variety of digital modules from different manufacturers

Control 80/80f, boosters in the Motorola and DCC format, keyboard, Memory, Switch board, Lokmaus 1, s88 and LocoNet feedback modules, PC or Mac and all devices with LocoNet connection (IB-Control, FRED, IB-Switch) can be attached directly.

Using special adapters you can attach a Central unit, Control unit, Motorola Track power booster, Lokmaus 2® and X-bus devices.

MINI-DRIVE MOTORS

FOR DC, AC AND DIGITAL FUNCTION OUTPUTS

- Miniature drive motors in high quality metal construction
- For motorizing vehicles and working models
- Size 15,5 x 11 x 8 mm; shaft 11,5 mm long, OD 1,5 mm
- Includes pulley, setting lever and two fixing bolts

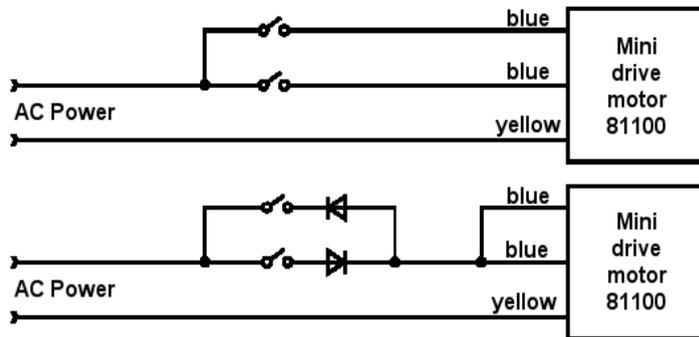

Abb. 1:1

To motorize vehicles and working models, e.g. crane cars, pantograph raising, gantry cranes or gate motors. The motor has torque of 0.12 Ncm and can lift a weight of 60g with the pulley. Load free speed of 30 rpm.

Available in two different Versions.

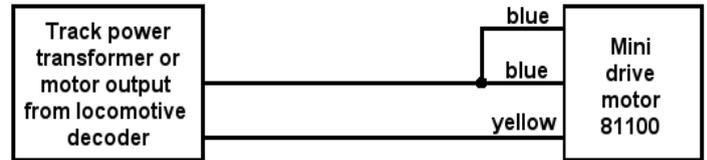

MINI-DRIVE MOTOR 81 100

For direct connection to **16V AC, 12V DC** power or to the motor output of a locomotive decoder.

The mini drive motor 81 100 is attached to DC or AC power. The direction of rotation can then be selected using two keys.

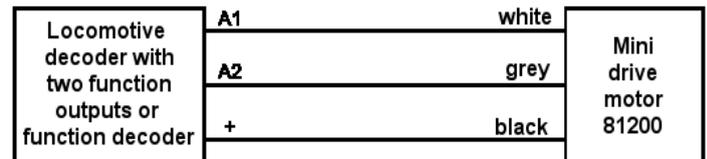

If the mini drive motor 81 100 is attached to the motor output of a locomotive decoder, its running speed can be regulated using the digital center's speed controller continuously.

Part No. 81 100 Drive motor for **16V = und 12V ~**
Deliverable from March 2005.

MINI-DRIVE MOTOR 81 200

For direct connection to the function outputs of decoders.

When connected to the function output of a locomotive or function decoder the motor can be switched ON and OFF using the function keys.

Part No. 81 200 Drive motor for digital function outputs
Deliverable from March 2005.

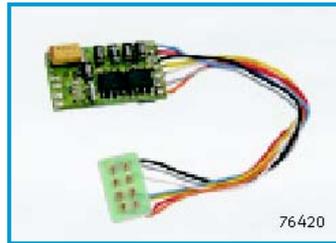

The gantry and cable reel are each driven by a Mini drive motor.

LOCOMOTIVE DECODER WITH LISSY INTERFACE

FOR HO-DC LOCOMOTIVES

- Multi-protocol decoder with load regulation
- Replacement for locomotive decoder 76 500 und 76 520
- With output for LISSY Mini-transmitter module
- Extended Motor regulation
- DCC und Motorola data format
- With 4 Function outputs @ 1 A, two of which depend on travel direction
- Short circuit and over heating protection for all outputs
- Motor output 1 A
- Size 22 x 12,5 x 5 mm

Part No. 76 400 with solder tails

Part No. 76 420 with 8-pol. NEM 652 plug

HO -AC =DC **rrMot rrDCC** **SUSI** **LISSY** **DIGITAL 2**

Deliverable from May 2005.

H0-SOUND DECODER

LOCOMOTIVE DECODER WITH INTELLISOUND

- A combination of locomotive decoder 76 420 and an IntelliSound module
- With output for LISSY Mini-transmitter
- Available in 4 variants, each with 8-pol. connector and loudspeaker or with 21-pol. connector
- Size 31 x 16,6 x 5,5 mm

Sound	with 8-pol. Connector	with 21-pol. Connector
For individual Programming	Part No. 36 020	Part No. 36 030
Large steam locomotive/BR 01 etc.	Part No. 36 120	Part No. 36 130
Large diesel locomotive/BR 218/220	Part No. 36 220	Part No. 36 230
Electric locomotive old style/E10 etc.	Part No. 36 320	Part No. 36 330

Deliverable from July 2005.

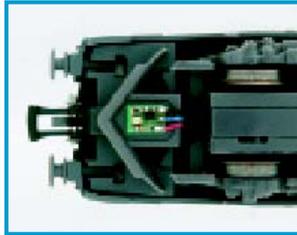

DECODER REFERENCE TABLE

Type	76 400 / 76 420	Sound module
Data format	Mot-DCC	Mot-DCC
Gauge	TT-H0e-H0m-H0	TT-H0e-H0m-
Address range Märklin / Uhlenbrock	80 / 9999	80 / 9999
Speed steps	14-128	14-128
Motor's maximum current consumption	1 A	1 A
For bell armature motors	yes	yes
Load regulation	yes	yes
Programmable Motor performance	yes	yes
Function outputs with direction dependence	4/2	4/2
Dimmable light outputs	yes	yes
Shunting gear	yes	yes
Acceleration/brake inertia	yes	yes
Automatic analog detection	yes	yes
DC Analog operation	yes	yes
Short circuit detection	yes	yes
SUSI interface	yes	yes
Interface for LISSY Mini-transmitter	yes	yes
Sound module onboard	no	yes
Updatable Flash-Memory	yes	yes
Connection	Cabel / NEM 652	NEM652/21-pol
Size in mm	22x12.5x5	31x 6.6x5.5

LISSY MINI-TRANSMITTER

MINI-INFRARED-TRANSMITTER FOR THE LISSY-SYSTEM

- Infrared-transmitter for the individual locomotive control system LISSY
- For connecting to an Uhlenbrock locomotive decoder 76200, 76400 / 76420 and to the Sound decoder from the 36xx series
- Fits under the NEM coupler housing
- For all vehicles, that have to trigger control functions
- Sends addresses in the range 1 to 9999 and one of four train categories
- Independent of track gauge and digital format
- Size 7 x 5,1 x 1,7mm
- With connector for the SUSI interface

Part No. 68 400 LISSY Mini-transmitter

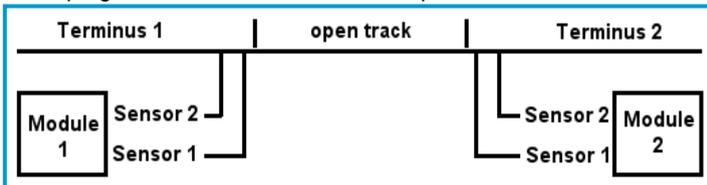

LN **DIGITAL 2**

Deliverable from March 2005.

SHUTTLE TRAIN CONTROL

LISSY-SPECIAL EDITION

- Pre-configured Module
- Just install and off it goes
- Usable with almost all Digital centers
- Re-programmable to other automatic operations

In the first LISSY system special edition are the pre-configured modules for a single-railed shuttle train, so that the section can be set up with programming and be operational immediately.

Contents: 1 LISSY system transmitter, 2 LISSY Receivers, 2 LocoNet cables 2.15 m with the LISSY system manual and a special guide for the installation and start-up the shuttle trains.

Part No. 68 010 LISSY-Shuttle train control

Available now.

LOCONET PANEL DISPLAY

LISSY INFORMATION AT THE CONTROL PANEL

- For display of locomotive information on the control panel, that is reported by a LISSY receiver
- Display of address and speed in km/h
- 4 digit display
- Size 63 x 25,5 x 25,5 mm
- Cutout size 59 x 22 mm
- Includes mounting material and LocoNet cable

Abb. 1:1

Part No. 63 440 LocoNet Panel display

LN **DIGITAL 2**

Deliverable from March 2005.

INFO LISSY

THE INDIVIDUAL LOCOMOTIVE CONTROL SYSTEM

LISSY consists of an Infrared transmitter, which are installed under the vehicle, and a receiver module, whose Infrared sensors are both built into the track.

The locomotive address and train category sent by the Infrared transmitter are recognized by the receiver and conveyed to the LocoNet, without the need of a computer, to activate various automatic control functions:

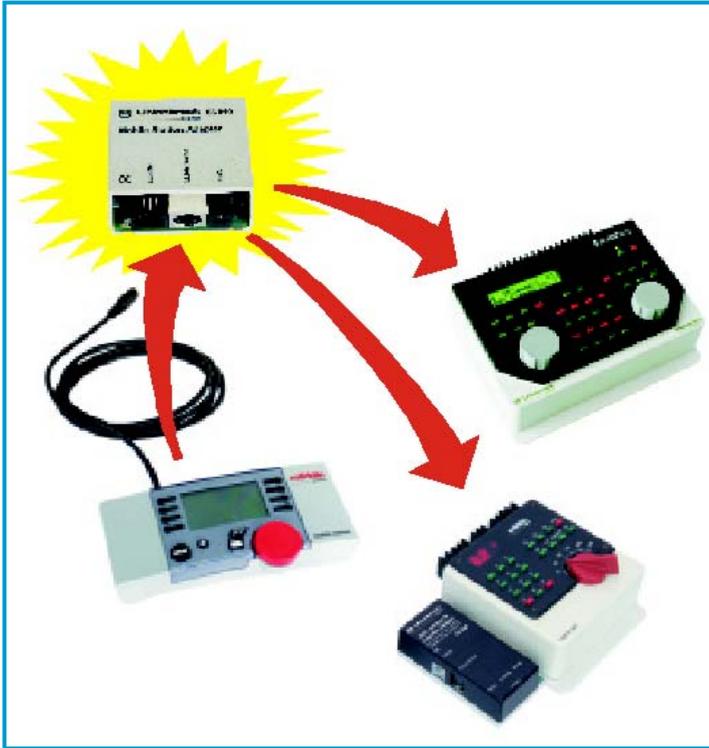

Train recognition • Block section control • Shuttle train control • Train dependent shadow station control • Speed measurement • Train control system (switches situation-dependent special functions of different locomotives).

The LISSY system works without track isolation, without additional components and without the need for a computer. It can easily be retro-fitted into a model railway layout.

MOBILE STATION ADAPTER

CONNECTS THE NEW WORLD TO THE LOCONET WORLD

The mobile station adapter connects a Märklin mobile station 63 810 with the LocoNet connection of a digital center. With the adapter the mobile station can be used as an additional hand control for locomotive control at the LocoNet center, e.g. Intellibox, DAISY or TwinCenter. Together with the 6021-Infrared & LocoNet adapter it is also possible to run the system from a Märklin 6021 control unit.

In addition with the adapter the functionality of the mobile station is extended. Normally the mobile station cannot control solenoids. With our adapter it is possible from a LocoNet center.

All control functions are available, all special functions adjustable. The internal data base can be fully used. Using the function keys turnouts can be switched.

Part No. 63 810 mobile station Adapter

Available now.

TRACK DIAGRAM PANEL

MADE BY UHLENBROCK

Electronics of the two track diagram panels from Erbert Modellbahn-Technik and Modelltec come from Uhlenbrock. They are compatible with the Intellibox and other centers with LocoNet connection.

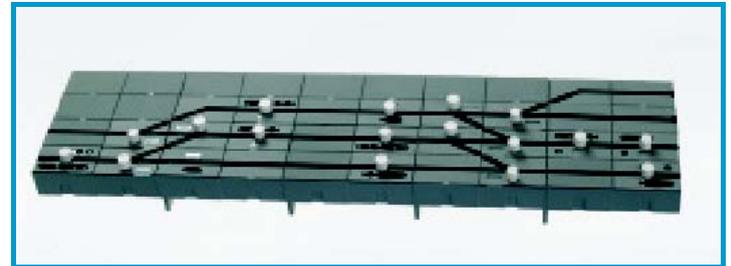

The new track diagram panels are attached directly to the LocoNet. The connectors of the individual modules are connected by 6 way flat cables. That avoids the time consuming and laborious soldering of the cables. That means a fast, simple and clear wiring with short cable runs.
