IntelliDrive - Digital decoder

Decoders for HO DC Motors

76320 with 8 way NEM 652 Interface Plug

76150 with PluX 16 Interface

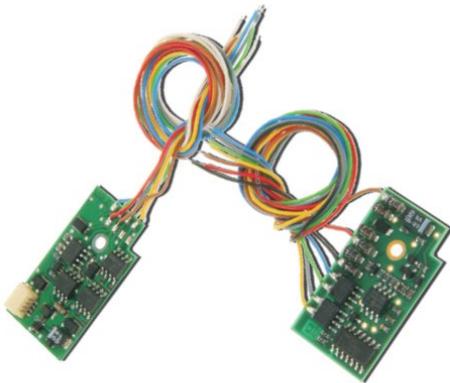

76560 with PluX 22 Interface

76330 with 21 way MTC Interface

Decoders for HO Universal Motors

76200 for Universal Motors

75000 for Universal Motors

The digital decoder is the brain of your locomotive. It determines the driving characteristics and switching options. A cheap decoder can rapidly spoil your enjoyment of the vehicle. IntelliDrive decoders are at the top of technology and guarantee you optimum driving characteristics. In our extensive range you will find a decoder for your locomotive.

The PluX 22 decoder is a milestone. Equipped with outputs for light and seven additional special functions all switching possibilities are catered for. With the new PluX 22 interface board, installation is also possible in locomotives that are not fitted with a PluX connection.

Uhlenbrock digital decoders can be operated with DCC centers from all manufacturers and all centers from Märklin®. The exception is the decoder 75 000, which is specifically intended for Märklin®.

In DCC operation the decoders can be run with 14, 27, 28 or 128 speed steps. They can be set to long addresses. This results in an address range 1–9999.

In Motorola® operation the decoders have an address range of 1–255. With the Märklin® Centers 6020 and 6021 however only 80 addresses are available.

The decoders are programmable with Motorola® and DCC Centers in all common programming modes.

The locomotive motors are controlled by the decoders with load regulation and motor power with a frequency of 18.75 KHz which results in extremely smooth and quiet running. Minimum speed, maximum speed and start/brake inertia are configurable. The direction dependant light outputs are dimmable, and with some decoders so are the special function outputs. An additional switchable shunting mode provides accurate speed control at low speeds.

Shunting mode and start/stop inertia can be switched on and off with f3 and f4.

For automatic braking in signal sections the Märklin® brake section or the DCC conforming brake signal can be used.

All decoders with SUSI interface, a 4-way mini-socket, have the option to connect a sound module and LISSY Mini-transmitter.

On mini-decoders this connection is done with solder pads.

All HO decoders can be used on conventional DC or AC layouts. The DCC data format used is according to the NMRA DCC Standard and is compatible with all NMRA compliant DCC Systems.

Address, driving direction and speed are permanently saved in digital operation. All decoders can be programmed in situ.

Uhlenbrock decoders are updatable with flash memory. They are protected against overheating and with multi-protocol decoders all outputs have short circuit protection.

The latest chip technology provides for minimal warming and for a trouble free running even with short power interruptions like with dirty pickup that often happens on turnouts.

Mini Decoder Scale N

with improved Characteristics

One of the smallest multi-protocol decoders in the market now with a constant current capability of 500mA (so far 300mA). Short term, it can even drive 1A (so far 600mA), if it is required. It even drives small lamps in older locomotives now. In the event of an error the error buffer will inform about the state of the motor and light outputs.

Part No. 73 400 Mini Decoder Scale N with cable connection
Part No. 73 410 Mini Decoder Scale N with 6-way plug
Available Now

Decoder Scale N - TT

larger Loads than the Mini-decoder but still small

The decoder fills the gap between the mini-decoder for N-scale and the H0 Decoders. Ideal for TT locomotives and N locomotives with higher current demands. Applicable on all DCC layouts. The decoder has all characteristics of the N decoder 73400 and also has two additional special function outputs (except 73110) for lighting, smoke unit etc. The constant current load is 600mA and the short time maximum load is 1A.

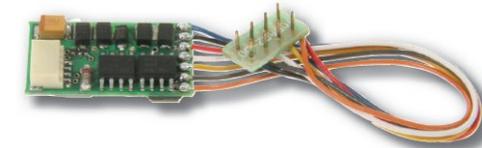

Part No. 73 100 Decoder Scale N-TT with cable connection
Part No. 73 110 Decoder Scale N-TT with 6-way plug
Part No. 73 140 Decoder Scale N-TT with 6-way plug
Prospective delivery from August 2011

Decoder Spur H0

with new Load Regulation

Decoders 76 400 and 76 420 have been thoroughly reworked and given the load regulation of our top model 76 560. Already with the factory defaults most locomotives run smoothly like their prototypes. The constant current load is 1A and the short time maximum is 2A.

Part No. 76 420 Decoder Scale H0 with 8-way plug
Available from Februar 2011

Decoder Spur 0 - II m

for larger Loads

The proven decoder 77 500 now has a peak current of 5 Ampere (so far 3.2 A). Now you can also run units with two motors without any problems.

Part No. 76 560 Decoder Scale 0-II m
Available Now

Decoder with PluX22 Interface H0 Scale

the decoder with the largest variety of functions

A decoder that fully utilizes all options of the PluX22 interface and even more. All 7 additional special functions of the interface can be used with a load of 0.4 A. The decoder delivers a constant motor current of 1.2A and short term peak of 2A.

The special function outputs can be controlled with function keys f1 to f12 (function mapping). They are dimmable and can blink at a configurable frequency.

For operating electric couplings, two time- controlled outputs are provided. For a dynamic smoke development of a smoke generator these can also be speed step dependant.

Head and tail lights are switched depending on the travel direction. Together with our interface board 71 680 it is a universal decoder that can be installed in all types of vehicles.

Part No. 76 560 PluX 22 Decoder
Available Now

Digital Interface Socket

For rapid Decoder exchange

A Digital Interface Socket makes digitizing of locomotives child's play. The sockets are installed in the vehicles. The plugs are then soldered to the module, e.g. a Digital decoder or reversing switch. Then changing a decoder is no longer a problem and only takes a few seconds. The dimensions of the plug and socket are in accordance with the NEM Standard NEM.

Now also for PluX-Decoders

The Interface board 71 680 is intended for the retrofit of all PluX-Decoders. Besides a PluX-22 socket it offers a SUSI and a LISSY interface socket, and also the pads for soldering the connecting wires. With this board and our Decoder 76 560 you can equip every locomotive with up to seven Functions.

IntelliDrive Pickup Switch

For Railcars with two Pickups

With railcars that have two pickups it is essential that the power always comes from the front pickup so that the train stops correctly at a red signal.

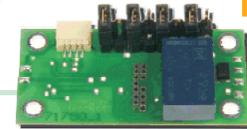

The pickup switch 71 750 ensures that always the front pickup, relative to travel direction, is used.

The pickup switch is for installation in vehicles with solder points for front and rear pickups, motor, front and rear lights and prepared for f1, f2.

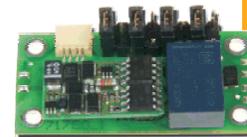

The Decoder 76 150 is additionally used and simply plugged onto pickup switch.

Dimensions: 40 x 20 x 10 mm

Part No. 71 750 Pickup Switch

71750 Pickup Switch

71750 Pickup Switch with 76150 Decoder

Motor Suppressor Kit

For Reducing Motor interference

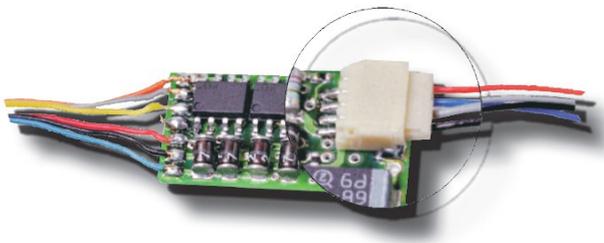

Electric motors in principle produce interference, which can change the data transfer to a Digital decoder to such an extent that normal operation of the decoder is not possible.

With newer locomotives the motors, as a rule are suppressed.

Older units can be retrofitted with these electronic components.

The Motor Suppressor Kit consists of a capacitor, two chokes and installation instructions.

Part No. 71 500 Motor Suppressor Kit

IntelliSound – this is how a real train sounds!

IntelliSound is the digital Sound system from Uhlenbrock/DIETZ for Model Railways.

IntelliSound is available as a sound decoder, that is, a digital decoder with integrated sound module and as sound module for connecting to a SUSI interface of a digital decoder.

The division of decoder and sound into two very small units and the extremely efficient small loudspeaker makes IntelliSound useful even with very little space.

The sounds from the sound module are mixed from three or four independent sound channels. The module can hold up to 40, or 320 seconds of original digitalized sound. Using an intelligent sound control the individually saved original sounds are dependent on the various running situations as in a real train, giving a rich experience.

IntelliSound can independently differentiate between the stop, acceleration, normal running, idle, braking, uphill and downhill states.

The sounds will always be played to match the situation. Thus for a stationary steam engine you hear the boiler hissing, the air pump, the injector and coal shovelling. When starting, a very strong chuff is heard, in idle, the sound of load free drive rods. When the locomotive brake is applied you naturally hear the squealing brakes. When switching the sound on and off a diesel for example you hear the motor starting up or running down to a stop.

On every module sounds additional to the dynamic running sounds can be switched. Among these is the vehicle whistle, a bell, a signal horn or motor fan in an E-locomotive.

SUSI – The universal Interface

SUSI (Serial User Standard Interface) is the interface for connecting additional devices to a digital decoder, and is supported by a number of manufacturers. Locomotives that are fitted with decoders with SUSI, can easily be retro-fitted with Sound and additional special functions.

By dividing the locomotive decoder and sound module even the

SUSI Distribution Cable

A SUSI distributor is available as an accessory so two sound modules can be connected to one decoder. This way a second separately controllable sound module can be connected to a Decoder, e.g. for twin motor locomotive such as the V320 or the

tinest space in a locomotive can be optimally utilized. Furthermore a locomotive can be fitted with sound at a later time without having to replace the decoder.

Many of our decoders are equipped with a SUSI interface and are therefore ready to connect an IntelliSound module.

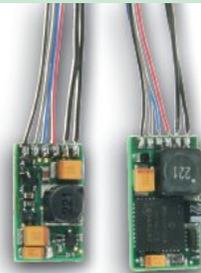

VT 18.16 railcar. The distributor can also be used as an extension cable.

Part No. 71 100 SUSI Distributor 70mm,
1 Plug/2 Sockets

IntelliSound 3- Modules and Decoders

- 320 Second Sound buffer
- Own sounds can be added
- Sound dependant special function outputs

- 4 Channels can play simultaneously
- Function mapping to F28
- Hall sensor for wheel synchronization of puffs
- With SUSI interface
- Connection for storage capacitor

*IntelliSound 3 and IntelliSound Module
Size Comparison*

**Voith Maxima with
Decoder 76 560, Sound module 32 100 and
Loudspeaker 31 140**

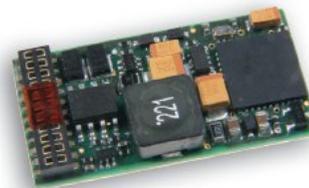

The new IntelliSound 3 modules and decoders are particularly characterized by their large sound buffer and their small dimensions. Now it is much simpler to convert small H0 locomotives or even N and TT scale with Sound.

You process your own sounds with some PC sound software, save them as WAV File and load them into the module with our SUSI-Sound-Manager. So a station announcement could be played by pressing a function key. Up to 4 additional personal Sounds can be loaded into a module in and assigned to any desired function key.

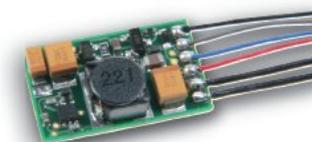

Except for the IntelliSound 3 mini decoder, all modules and decoders have two sound dependant special function outputs which open up new dimensions:

- the engineer shovels then the firebox flickers
- the chuffs work harder then the smoke unit develops more smoke
- the Elok drives over the layout, the pantograph sparks
- the freight train brakes hard the brakes linings begin to glow

The modules and decoders provide a connection for a Hall sensor, which is useful for wheel synchronization of cylinder chuffs or wheel squeaking in curves.

IntelliSound - Loudspeakers

New to the program is a 23 mm diameter loudspeaker that fits into locomotives which already have a location made for a 23mm loudspeaker. The loudspeaker with 3.6mm is very flat. It is supplied without a resonance shell.

Part No. 31 183 23 x 3.6 mm, 0.4 W
Prospective delivery from March 2011

NEW

Decoder 76 420, Sound module 32 100 and loudspeaker 31 130 installed in a PIKO Taurus. See the parts.

The Loud speakers which we offer specially for Uhlenbrock IntelliSound modules and decoders in the H0 range, are characterized by the smallest dimensions.

In the H0 range we offer various loudspeakers with resonance shells. Two larger ones, because a valid reason for selecting a loudspeaker is: The larger the loudspeaker, the stronger the sound.

Part No. 31 110 15 x 25 x 12 mm, 0,5 W
Part No. 31 120 18 x 18 x 12 mm, 1 W*
Part No. 31 130 20 x 40 x 12 mm, 1.5 W
Part No. 31 140 28 x 28 x 12 mm, 2 W*
All dimensions include the resonance shell

There is also the possibility that a loudspeaker is installed in a "ghost wagon" directly behind the locomotive.

For vehicles where there is no space for a loudspeaker with a resonance shell we offer flat loudspeakers without resonance shells. The 28 mm loudspeaker is intended for vehicles which a provided with a location for a 28 mm loudspeaker.

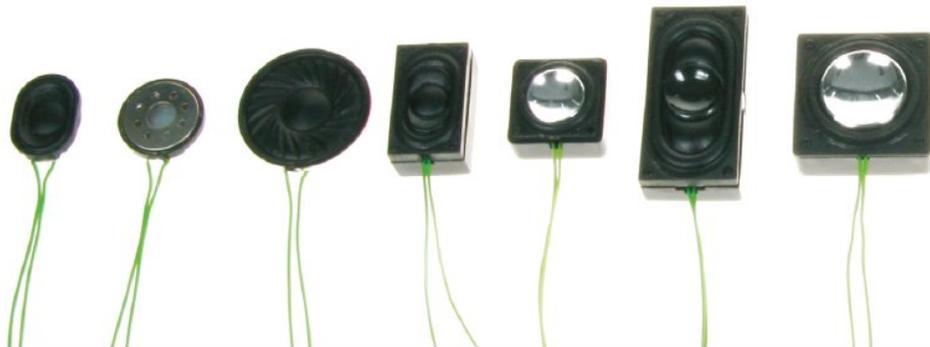

Part No. 31 180 13.5 x 19.5 x 4 mm, 1 W
Part No. 31 181 18 x 3.7 mm, 0.9 W*
Part No. 31 182 28 x 5.4 mm, 0.5 W

For track gauges of 0 to 11m we have larger loudspeakers in our range.

Part No. 31 150 34 x 34 x 15.5 mm, 3 W
Part No. 31 160 46 x 46 x 22 mm, 3 W*
Part No. 31 170 57 x 57 x 39 mm, 10 W

*The loudspeaker marked with * have a metal membrane.
All loudspeakers are 8 Ohm.
Except for loudspeaker 31150, which is 4 Ohm.*

IntelliSound - Loading Adapter

Now also available with **NEW** USB interface

For IntelliSound Modules and Decoders with SUSI Interface

- Loading of Sound
- Testing of sounds and functions
- Start running simulation
- Programming CVs
- With SUSI interface

With the Sound Loading adapter the Sounds from our Sound Library can be loaded from a PC into the IntelliSound modules and decoders. All functions can be tested and with a running simulation the sounds can be previewed. In addition all CVs in the Sound modules can be programmed.

The Sound Loading adapter is connected directly to the PC's serial Com Port or via a connecting cable (9-way SubD socket) or the USB interface and a 12 - 16V ~ transformer. The Sound module is connected to the SUSI Interface of the Loading adapters.

On the accompanying CD you will find the program for Loading

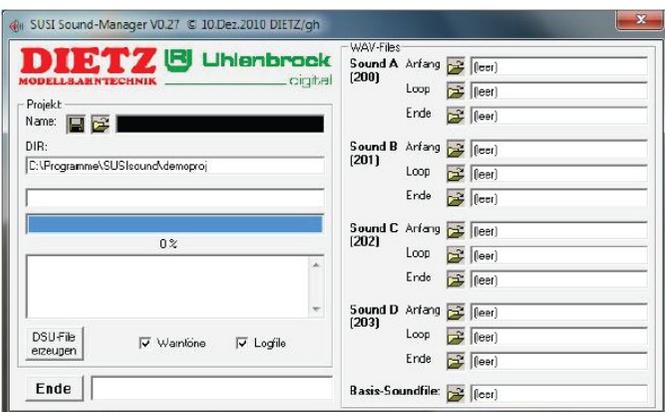

adapter and many different sounds from steam, Diesel and Electric locomotives to trams and tractors.

System requirements: Windows 2000, XP, Vista or 7.

Contents:

Sound Loading adapter, CD with the SUSI-Com program for Windows, operating instructions, Sound Loading cable for IntelliSound Decoders, SUSI/21-way Adapter for IntelliSound Decoder with 21-way interface.

- Part No. 31 010** Sound Loading cable (Com-Port)
- Part No. 31 050** USB Sound Loading adapter with Program SUSI-SoundManager
Prospective delivery from June 2011
- Part No. 31 020** Sound Loading cable 70 mm for Sound decoder, single
- Part No. 31 030** SUSI/21-way Adapter for IntelliSound Decoder with 21-way interface, single

IntelliSound - SUSI-SoundManager

in combination with the Sound Load adapter and the IntelliSound 3

- Loading of up 4 sounds
- Sound configurable 1x /on/loop/off

With the SUSI-SoundManager up to 4 additional Sounds of your own can be add to the Sound data in the IntelliSound 3 Modules.

For preparing the Sounds in wav Format the Windows Audio Recorder or another Sound Program can be used.

System requirements: Windows 2000, XP, Vista or 7.

- Part No. 31 060** Program SUSI-SoundManager to add to Sound Loading adapter 31010
Prospective delivery from June 2011.

Are you looking for a sound for a special locomotive, tram or tractor? Then visit the Sound Library on our Internet site. Here you will always find available Sound files to try and download free of charge.

With LISSY you can control your digital layout automatically without a Computer. LISSY is the same as the Fleischmann Train Navigation and offers interesting Functional extensions.

LISSY — the Locomotive individualized Control System

- Train identification by locomotive address and/or train category
- Shuttle train control
- Locomotive dependant shadow station control
- Digital block control
- Speed measurement
- Automatic control of special functions and locomotive speed
- Precise stopping
- Works without track isolation

LISSY consists of an Infrared transmitter which is mounted on the vehicle, and a receiver module whose Infrared sensors are installed in the track.

The locomotive address and train category from the Infrared transmitter are reported to the LocoNet by the receiver. Therefore a variety of automatic control functions can be realized without the installation of a Computer.

LISSY Infrared Transmitter

Every vehicle which is to trigger an automatic function is fitted with a LISSY Infrared transmitter. The module sends addresses in range 1–16382 and four train categories. Such as ICE, passenger train or freight train.

The new Infrared transmitter offers the following advantages:

- Very simple
- Higher operating reliability with two IR-LEDs
- External LISSY mini transmitter connection

The transmitter behaves like a DCC decoder and can also be programmed like one. The address and train category are entered into CVs. The size is now only 13.1 x 7.5 x 1.9 mm, before 13.5 x 8.4 x 2.5 mm. Therefore the unit fits under many vehicles which previously could not be fitted with LISSY.

Part No. 68 310 LISSY Infrared transmitter, single
Part No. 68 311 LISSY Infrared transmitter, 5er Pack
Prospective delivery from March 2011

Complete Catalogue 2011/2012

Our complete 76 page catalogue with all our products, many Tips and advice can be obtained for 3,50 EUR from your local

Uhlenbrock dealer, sending postage stamps to the value of 5,- EUR directly to us or by ordering online on our internet site.
